Return Processing Flow Diagram

Step-by-Step Process

1. Start

The return process begins when the customer decides to return a product.

2. Initiate Return Request

The user selects the product and clicks the **Initiate Return** button.

3. Choose Return Method

The system asks the user to select a return method:

- Return via Mail
- Return to Store

4. **Return via Mail (Initial Step)**

The system begins the mail return procedure.

5. **Check Eligibility for Return**

The system verifies whether the product is eligible for return based on:

- Return policy
- Return time period
- Product condition

6. **If Eligible (Yes)**

- The user **prints the return label**.
- The user **packages the item securely**.
- The user **ships the package back** to the company.

7. **Receive Refund**

After the returned item is received and verified, the **refund is processed**.

Store Return Process

8. **Return to Store**

The user chooses to return the item directly to a physical store.

9. **Bring Item to Store**

The user takes the product to the store location.

10. **Return Processed at Store**

The store staff checks the item and processes the return.

11. **Receive Refund (Store)**

The refund is issued after the return is accepted.

If Return Is Not Eligible

- If the product **does not meet the return conditions**, the system shows **Return Not Accepted**.
 - The process then **ends without refund**.
-

End

The process ends once:

- The **refund is received**, or
- The **return request is rejected**.

Return Request and Refund Processing System

1. Return Request User Interface

The Return Request screen allows the user to start the return process for a purchased product.

Explanation:

- The screen displays the product details, such as the product image, name (Apple Watch), and price.
- A back arrow is provided at the top to navigate to the previous screen.
- The Initiate Return button allows the user to start the return process.
- When the user clicks Initiate Return, the system moves to the Choose Return Method screen.

This screen acts as the starting point of the return process.

2. Choose Return Method Interface

The Choose Return Method screen allows the user to select how they want to return the product.

Explanation:

- Two return options are available:
 - Return via Mail – The user sends the product through a courier service.
 - Return to Store – The user physically brings the product to the store.
- Each option is represented with an icon and button for easy selection.
- After selecting a method, the user presses the Continue button to proceed to the next step.

This screen helps the system determine the return processing path.

3. Return Confirmation Interface

The Return Confirmation screen confirms that the return request has been successfully submitted.

Explanation:

- The screen displays the message “Return Submitted Successfully.”
- It informs the user that the refund will be processed after the return is received and verified.
- A Track Return button allows the user to monitor the return status.
- The back arrow helps the user navigate back if needed.
